Background

This gene encodes a member of the Smad family of signal transduction proteins. Smad proteins are phosphorylated and activated by transmembrane serine-threonine receptor kinases in response to transforming growth factor (TGF)-beta signaling. The product of this gene forms homomeric complexes and heteromeric complexes with other activated Smad proteins, which then accumulate in the nucleus and regulate the transcription of target genes. This protein binds to DNA and recognizes an 8-bp palindromic sequence (GTCTAGAC) called the Smad-binding element (SBE). The protein acts as a tumor suppressor and inhibits epithelial cell proliferation. It may also have an inhibitory effect on tumors by reducing angiogenesis and increasing blood vessel hyperpermeability. The encoded protein is a crucial component of the bone morphogenetic protein signaling pathway. The Smad proteins are subject to complex regulation by post-translational modifications. Mutations or deletions in this gene have been shown to result in pancreatic cancer, juvenile polyposis syndrome, and hereditary hemorrhagic telangiectasia syndrome.

Validation Data

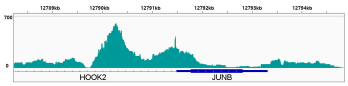
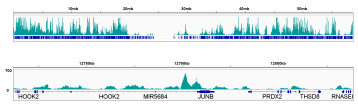
Chromatin immunoprecipitation analysis of extracts of HepG2 cells, using [KO Validated] Smad4 Rabbit mAb (A19116) and rabbit IgG.The amount of immunoprecipitated DNA was checked by quantitative PCR. Histogram was constructed by the ratios of the immunoprecipitated DNA to the input.



CUT&Tag was performed using the CUT&Tag Assay Kit (pAG-Tn5) for Illumina (RK20265) from10^5 K562 with 1 µg of [KO Validated] Smad4 Rabbit mAb (A19116), followed by incubation with Goat Anti-Rabbit IgG(H+L)(AS070).The results denote the enrichment pattern of Smad4 around JUNB gene.



CUT&Tag was performed using the CUT&Tag Assay Kit (pAG-Tn5) for illumina (RK20265) from 10^5 K562 cells with 1ug µg of [KO Validated] Smad4 Rabbit mAb (A19116), followed by incubation with Goat Anti-Rabbit IgG(H+L)(AS070). The CUT&Tag results denote the enrichment pattern of [KO Validated] Smad4 Rabbit mAb across chromosome 19 (upper panel) and the genomic region encompassing JUNB, a representative gene enriched in [KO Validated] Smad4 Rabbit mAb (lower panel).
