Background

This gene encodes E-cadherin, a calcium-dependent cell adhesion molecule that functions in the establishment and maintenance of epithelial cell morphology during embryogenesis and adulthood. The encoded preproprotein undergoes proteolytic processing to generate a mature protein. Targeted mutations disrupting binding of calcium to the encoded protein in mice cause death in utero due to failed blastocyst and trophectoderm formation. This gene is located adjacent to a related cadherin gene on chromosome 8.

Validation Data

Flow cytometry: 1×10^6 CHO-S cells (negative control, left) and CHO-S (Transfection, right) cells were surface-stained with PE Rabbit anti-Mouse E-Cadherin/CD324 mAb (A26477,5 μ l/Test, orange line) or PE Rabbit IgG isotype control (A24172,5 μ l/Test, blue line). Non-fluorescently stained cells were used as blank control (red line).
