Background

This gene encodes a member of the scavenger receptor cysteine-rich (SRCR) superfamily. Members of this family are secreted or membrane-anchored proteins mainly found in cells associated with the immune system. This protein is a type-I transmembrane glycoprotein found on the surface of thymocytes, T lymphocytes and a subset of B lymphocytes. The encoded protein contains three SRCR domains and may act as a receptor to regulate T-cell proliferation. Alternative splicing results in multiple transcript variants encoding different isoforms.

Validation Data

Flow cytometry: 1×10^6 Human PBMC were surface-stained with ABflo® 610 Rabbit IgG isotype control (A25826,5 μ l/Test,left) or ABflo® 610 Rabbit anti-Human CD5 mAb (A27931,5 μ l/Test,right). Cells in the lymphocyte gate were used for analysis.
