

Recombinant Mouse GSK-3 beta/GSK3B Protein

Catalog No.: RP03186LQ **Recombinant**

Sequence Information

Species	Gene ID	Swiss Prot
Mouse	56637	Q9WV60

Tags

N-His

Synonyms

7330414F15Rik; 8430431H08Rik;
C86142; GSK-3; GSK-3beta; GSK3b

Product Information

Source	Purification
Baculovirus-Insect Cells	> 75% by SDS-PAGE.

Endotoxin

< 1.0 EU/μg of the protein by LAL method.

Formulation

Supplied as sterile 20mM Tris, 500 mM NaCl, 25% glycerol, 0.2 mM DTT, pH 7.4.

Reconstitution

Background

GSK3B is a serine-threonine kinase, belonging to the glycogen synthase kinase subfamily. It contains 1 protein kinase domain, and is expressed in the testis, thymus, prostate, and ovary and weakly expressed in the lung, brain, and kidney. GSK3B is involved in energy metabolism, neuronal cell development, and body pattern formation. Polymorphisms in the GSK3B gene have been implicated in modifying the risk of Parkinson's disease, and studies in mice show that overexpression of this gene may be relevant to the pathogenesis of Alzheimer's disease. GSK3B participates in the Wnt signaling pathway. It is implicated in the hormonal control of several regulatory proteins including glycogen synthase, MYB, and the transcription factor JUN. Phosphorylates JUN at sites proximal to its DNA-binding domain, thereby reducing its affinity for DNA. Phosphorylates MUC1 in breast cancer cells, and decreases the interaction of MUC1 with CTNNB1/beta-catenin. GSK3B also plays an important role in ERBB2-dependent stabilization of microtubules at the cell cortex. It prevents the phosphorylation of APC and CLASP2, allowing its association with the cell membrane. In turn, membrane-bound APC allows the localization of MACF1 to the cell membrane, which is required for microtubule capture and stabilization. GSK3B phosphorylates MACF1 and this phosphorylation inhibits the binding of MACF1 to microtubules which are critical for its role in bulge stem cell migration and skin wound repair. It may be required for early embryo development and neuron differentiation.

Basic Information

Description

Recombinant Mouse GSK-3 beta/GSK3B Protein is produced by Baculovirus-Insect Cells expression system. The target protein is expressed with sequence (Met1-Thr420) of Mouse GSK-3 beta/GSK3B (Accession #Q9WV60) fused with His tag at the N-terminus.

Bio-Activity

1. The specific activity was determined to be > 20 nmol/min/mg using synthetic Phospho-Glycogen Synthase Peptide-2 (YRRAVPPSPSLSRHSSPHQpSEDEEE) as substrate. 2. Immobilized His-mGSK3B at 10 μg/mL (100 μL/well) can bind biotinylated human HG3C-CTNNB1, EC₅₀ of biotinylated human HG3C-CTNNB1 is 0.15-0.35 μg/mL.

Storage

Store at ≤-70°C, stable for 6 months after receipt. Store at ≤-70°C, stable for 3 months under sterile conditions after opening. Please minimize freeze-thaw cycles. Avoid repeated freeze/thaw cycles.

Validation Data

Recombinant Mouse GSK-3 beta/GSK3B Protein was determined by SDS-PAGE with Coomassie Blue, showing a band at 45-50 kDa.
