

Catalog No.: RP03434LQ **Recombinant**

Species	Gene ID	Swiss Prot
Human	8445	O92630

N-GST

DYRK2; Dual specificity tyrosine-phosphorylation-regulated kinase 2

Source E. coli	Purification ≥ 80 % as determined by SDS-PAGE; ≥ 80 % as determined by HPLC.
--------------------------	--

Calculated MW	Observed MW
93.0 kDa	80-100 kDa

< 1 EU/μg of the protein by LAL method.

Supplied as a 0.22 µm filtered solution in 50 mM Tris-HCl, 500 mM NaCl, 5% glycerol. (pH 8.0). Contact us for customized product form or formulation.

Please use running water to thaw it quickly.

Dual specificity tyrosine-phosphorylation-regulated kinase 2 is an enzyme, in particular a dual-specificity kinase, that in humans is encoded by the DYRK2 gene. DYRK2 belongs to a family of protein kinases whose members are presumed to be involved in cellular growth and development. The family is defined by structural similarity of their kinase domains and their capability to autophosphorylate on tyrosine residues. DYRK2 has demonstrated tyrosine autophosphorylation and catalyzed phosphorylation of histones H3 and H2B *in vitro*.

Recombinant Human DYRK2 Kinase is produced by E. coli expression system. The target protein is expressed with sequence (Leu2-Ser601) of Human DYRK2 (Accession #O92630) fused with a N-GST tag.

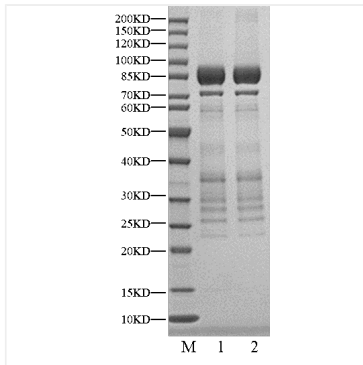

The activity of DYRK2 is based on the MSA technology, and the content and ratio of the substrate and the product are directly separated and detected in real time and dynamically by the different migration rates of the substrate and the product after the enzymatic reaction.

The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.

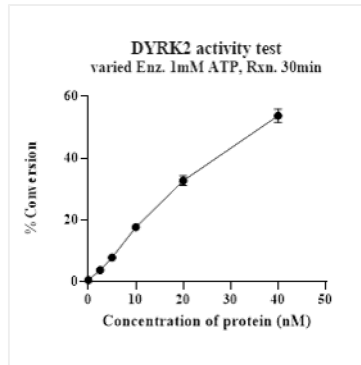

Store at -70°C. This product is stable at $\leq -70^{\circ}\text{C}$ for up to 1 year from the date of receipt. For optimal storage, aliquot into smaller quantities after centrifugation and store at recommended temperature. Aliquots below 10 μL are not advisable. Product must not be stored in diluted solutions. Avoid repeated freeze-thaw cycles. Avoid repeated freeze/thaw cycles.

For your safety and health, please wear a lab coat and disposable gloves for handling.

Validation Data

Recombinant Human DYRK2 Kinase was resolved with SDS-PAGE under reducing (Lane 1) and non-reducing (Lane 2) conditions.

The activity of DYRK2 is based on the MSA technology, and the content and ratio of the substrate and the product are directly separated and detected in real time and dynamically by the different migration rates of the substrate and the product after the enzymatic reaction.
