Recombinant Mouse IgM Protein

Catalog No.: RPT0022 Recombinant

Sequence Information

Species Gene ID Swiss ProtMouse 16019 P01872-1

Tags C-His

Synonyms

Ighm; IgM;Immunoglobulin heavy constant mu;Igh-6

Product Information

Source

Purification

HEK293 cells

≥ 95% as determined by SDS-

PAGE.

Calculated MW Observed MW

39.30 kDa 45-55 kDa

Endotoxin

< 0.1 EU/ μ g of the protein by LAL method.

Formulation

Lyophilized from 0.22 μ m filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.

Reconstitution

Centrifuge the vial before opening. Reconstitute to a concentration of 0.1-0.5 mg/mL in sterile distilled water. Avoid vortex or vigorously pipetting the protein. For long term storage, it is recommended to add a carrier protein or stablizer (e.g. 0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose), and aliquot the reconstituted protein solution to minimize free-thaw cycles.

Background

Constant region of secreted IgM (slgM), also known as the Fc region of IgM antibody. Able to multimerize, forms high order polymers, mainly pentamers and occasionally hexamers, providing for multivalency and high avidity recognition of antigens . Natural slgM are polyreactive and recognize conserved self- and pathogen-derived structures, whereas immune slgM are secreted only upon exposure to pathogens and are antigenspecific. Both natural and immune slgM are required for an efficient humoral immune response to infection. Mediates slgM effector functions mostly via Fc receptors and the complement system. On lymphoid cells binds high-affinity Fc receptor FCMR and promotes induction of an efficient neutralizing IgG response while maintaining tolerance to self-antigens. Recruits C1q complement component to initiate the classical complement pathway, facilitating the recognition and neutralization of pathogens by the host. Together with C1q and mannose-binding lectin promotes the phagocytosis of apoptotic cells by macrophages, ensuring the clearance of potential autoimmune epitopes from tissues. Involved in mucosal immunity. It is transported by transcytosis across mucosal epithelium by PIGR and secreted on the apical side in complex with PIGR secretory component to scan mucosal lining for pathogens. IgMantigen complexes undergo FCMR-mediated retrotranscytosis across mucosal M cells toward antigen-presenting cells in mucosal lymphoid tissues .

Basic Information

Description

Recombinant Mouse IgM Protein is produced by HEK293 cells expression system. The target protein is expressed with sequence (Ala105-Tyr454) of Mouse IgM (Accession #P01872-1) fused with a His tag at the C-terminus.

Bio-Activity

Shipping

The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.

Storage

Store at -20°C. Store the lyophilized protein at -20°C to -80 °C up to 1 year from the date of receipt.

After reconstitution, the protein solution is stable at -20°C for 3 months, at 2-8°C for up to 1 week.

Avoid repeated freeze/thaw cycles.

Operational Notes

For your safety and health, please wear a lab coat and disposable gloves for handling.

Validation Data

Recombinant Mouse IgM Protein was determined by SDS-PAGE under reducing conditions with Coomassie Blue.
